How To Run the Schema Extractor

Navigate to the URL at the bottom of this article or be on the GitHub page for the Dynamics365 Schema project

→

Download and Extract the Zip File

→

End

Open the command prompt and navigate to the directory that has the Dynamics365CommunitySchemaExtractor.exe (bin > Debug)

→

Type the name of the program (Dynamics365CommunitySchemaExtractor.exe) followed by the following details

→

Hit enter to run the program and pass in your parameters

→

Extract Complete should appear and the file has been generated in your specified or the default directory (if one was not specified)

→

End

For more info on connection string format, read this MSDN article: - https://msdn.microsoft.com/en-us/library/jj602970.aspx

→

At a minimum add the connection details by typing (after the filename) - c"Url=https://yourorgname.crm4.dynamics.com;Username=username;Password=password;authtype=Office365"

←

For other authentication types, use AD or IFD for on premise environments as required
